

HR Employee Management & Collaboration System

Business Requirements Document (BRD)

Version: 1.0

Date: February 2026

Target Implementation Period: 30 Days

1. Executive Summary

The HR Employee Management & Collaboration System is a web-based application designed to manage employee attendance, task assignments, and team collaboration. The system supports three primary user roles: HR, Manager, and Employee. It provides centralized control over employee profiles, attendance tracking, task monitoring, and real-time communication between teams.

2. Business Objectives

- Provide structured employee profile management.
- Enable HR to monitor and approve attendance records.
- Allow managers to assign and track tasks efficiently.
- Enable employees to mark attendance and update task progress.
- Provide real-time chat for collaboration between HR, managers, and employees.
- Improve transparency and team productivity.

3. Scope

In Scope:

- User registration and login (HR, Manager, Employee).
- Profile management for all users.
- Employee attendance marking and approval workflow.
- Employee Attendance tracking by manager.
- Task assignment, status updates, and tracking.
- Real-time chat module for collaboration.
- Basic reporting dashboard for HR and Managers.

Out of Scope (Initial Version):

- Payroll processing and salary calculation.
- Advanced analytics and AI-based performance evaluation.
- Biometric device integration

4. Stakeholders & Users

- HR – Manages employees, approves attendance, assigns managers, views reports.
- Manager – Assigns tasks, monitors team attendance, chats with employees, tracks performance.
- Employee – Marks attendance, views assigned tasks, updates task status, chats with team, manages profile.
- Project Evaluator – Reviews system functionality and completeness.

5. Functional Requirements

ID	Requirement Description	Priority	Actor
F1	User signup/login with role selection	High	All
F2	HR can manage employee records	High	HR
F3	Employee can mark attendance	High	Employee
F4	HR can approve/reject attendance	High	HR
F5	Manager assigns tasks to employees	High	Manager
F6	Employee updates task status	High	Employee
F7	Real-time chat between users	Medium	All
F8	Dashboard view for reports	Medium	HR/Manager

6. Non-Functional Requirements

- Backend: Python FastAPI Framework
- Frontend: HTML, CSS, JavaScript
- Database: MySQL
- Authentication: Role-based login system (JWT)
- Performance: Page response time < 3 seconds
- Security: Input validation, authentication checks
- Responsive design for desktop and mobile

7. Assumptions & Constraints

- Development timeline limited to 30 days.
- Single organization usage.
- Moderate number of concurrent users.
- Basic UI design prioritized over advanced styling.

8. High-Level Success Criteria

- Users can login based on roles.
- Attendance workflow functions correctly.
- Tasks can be assigned and updated successfully.
- Chat module works in real-time.
- System is stable and usable within project timeline.
